

## Living Donor First

Living organ donation allows healthy individuals to donate a kidney or part of their liver to patients in need, reducing wait times and offering better outcomes. At UVA Health, we perform living donations using minimally invasive techniques for quicker recovery. To learn more about becoming a living donor, contact the UVA Health Transplant Center.

### Benefits of Living Donation:

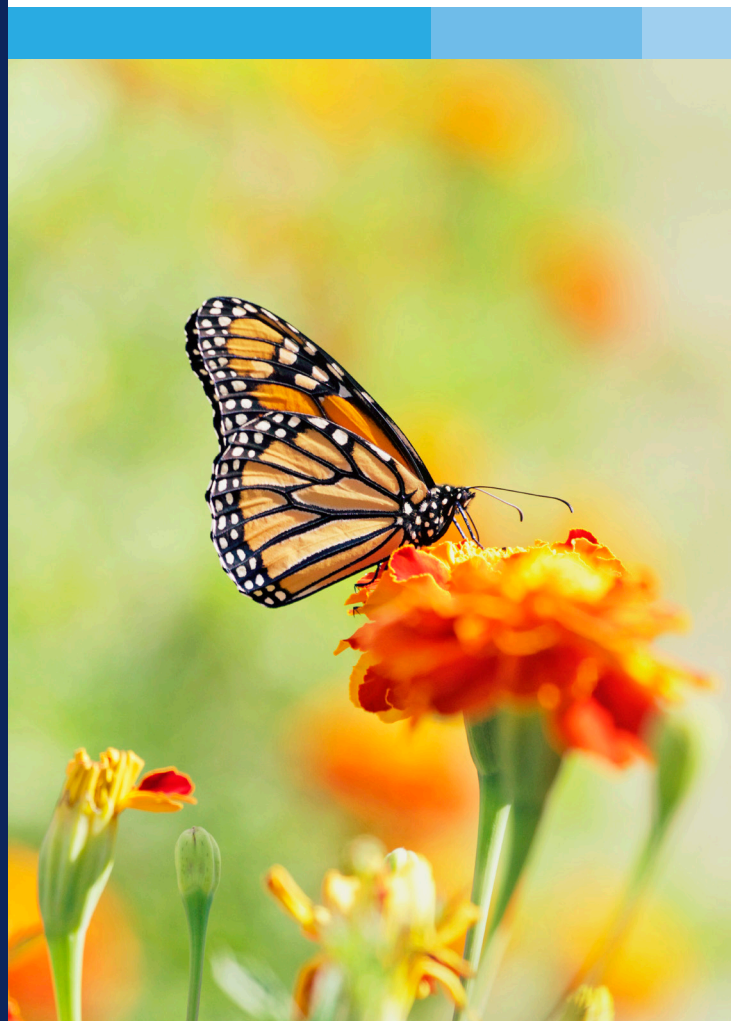

- Faster availability of kidneys and livers compared to deceased donations.
- Better outcomes with living donor organs typically lasting longer.
- Minimally invasive laparoscopic surgery for faster recovery.
- Thorough donor support and evaluation throughout the process.
